

Illustrating the alignment of the strike plate to the latch bar.
(In humid salty regions such as Miami, the bronze can develop a white film. This is easily cleaned with water.)

Typical strike plate mortised flush to the post or jamb

Illustrating the set-up for the provided gate stops.

The typical latch bar plate. The plates do not always align themselves with the mid-rail of the gate.

Showing the configuration of the gate stops to clear the Euro plate.
Note the Strike is mortised flush to the post
