

Metals and Patinas

Rocky Mountain Hardware uses only the highest quality bronze to achieve our unique designs. Silicon and white bronze are both alloys. Silicon bronze contains copper, silicon, and zinc creating a coppery-gold color. White bronze is composed of copper, manganese, nickel, and zinc producing a silver color.

Rocky Mountain Hardware products let the deep beauty of bronze speak for itself. Our hand-applied patinas enhance the hues of bronze creating an aged appearance. The photos shown here give a close representation of the true appearance of these patinas, however, the various elements of time, touch, and climate work together with the bronze and the patina to create a unique hue. Each piece, then, distinctly reflects its surroundings.
